SPICE model Validation

In order to properly analyze more critical components in terms of losses , is useful to first create a digital model of the device,a validation procedure of the SPICE models of each device has been performed. The following sections describes the procedure and results of this validation procedure.

All simulation results are available [1]

1.1 Fast Leg GaN FET model validation

This section describes the behavior of the SPICE model of EPC2304, compared to the EPC datasheet [2]
