Chapter 1

SPICE model Validation

In order to properly analyze more critical components in terms of losses , is useful to first create a digital model of the device,a validation procedure of the SPICE models of each device has been performed. The following sections describes the procedure and results of this validation procedure.

1.1 Fast Leg GaN FET model validation

This section describes the behavior of the SPICE model of EPC2304, compared to the EPC datasheet [1]

all simulation results are available [2]

1.1.1 Static charateristics

Output I-V charateristics

```
.temp 25

.dc Vds 0 6 0.1 Vgs list 2 3 4 5
```

Figure 1.1: Schematic for I-V validation

Figure 1.2: Datasheet I-V

Figure 1.3: SPICE I-V

Vds@Vgs	Ids (datasheet)	Ids (simulation)
Vds=1V;Vgs=2V	$\approx 0A$	25.13A
Vds=6V;Vgs=3V	$\approx 100A$	163.15A
Vds=1V;Vgs=4V	$\approx 150A$	187.12A
Vds=1V;Vgs=5V	$\approx 215A$	253.07A

Table 1.1: I-V data comparision

Trans charateristics

```
.step temp 25 125 100

.temp 25

.dc Vgs 0.5 5 0.1
```

Figure 1.4: Schematic for trans charateristics validation

Figure 1.5: Datasheet trans charateristics

Figure 1.6: SPICE trans charateristics

Comparing the 2 it seems like the real device has a Vth of $\approx 2V$,while the simulated one has a Vth of $\approx 1.5V$

Vgs@T	Ids (datasheet)	Ids (simulation)
Vgs=2.5V;T=25	$\approx 40A$	98.58A
Vgs=2V;	$\approx 100A$	163.15A
Vgs=2.5;	$\approx 150A$	187.12A
Vgs=4V;	$\approx 215A$	253.07A
Vgs=3V;T=25	$\approx 100A$	160.47A

Table 1.2: I-V data comparision

Rdson

Figure 1.7: Schematic for Rdson validation

Figure 1.8: Datasheet Rdson

Figure 1.9: SPICE Rdson

Vgs@Ids	Rds (datasheet)	Rds (simulation)
Vgs=2V;Id=15A	$\approx 17.5m\Omega$	$6.8m\Omega$
Vgs=3V;Ids=60A	$\approx 10m\Omega$	6Ω
Vgs=2V;Ids=15A	$+\infty$	$22m\Omega$
Vgs=5V	$\approx 4m\Omega$	$3.78m\Omega$

Table 1.3: Rds data comparision

Rdson vs tempearture

Figure 1.10: Schematic for Rdson vs tempearture

Figure 1.11: Datasheet Rdson vs tempearture

Figure 1.12: SPICE Rdson vs tempearture

Vgs@T	Rds (datasheet)	Rds (simulation)
Vgs=3.5V;T=25°C	$\approx 5m\Omega$	$4.6m\Omega$
Vgs=5V;T=125°C	$\approx 5.5m\Omega$	5.8Ω
Vgs=2.95V;T=25°C	$\approx 7m\Omega$	$5m\Omega$
Vgs=2.3V@T=25°C	$+\infty$	$10m\Omega$
Vgs=2.3V@T=125°C	$+\infty$	$21.2m\Omega$

Table 1.4: Rds temperature comparision

Figure 1.13: Datasheet Rdson vs temperature

Figure 1.14: SPICE Rdson vs temperature

Reverse body diode

Figure 1.15: Schematic for Reverse body diode

Figure 1.16: Datasheet Reverse body diode

Figure 1.17: SPICE Reverse body diode

Vgs@T	Rds (datasheet)	Rds (simulation)
Vss=4.5V;T=25°C	$250A$	$317A$
Vsd=3V;T=125°C	$\approx 50A$	$88.7A$
Vsd=4.5V;T=125°C	$\approx 148A$	$191A$

Table 1.5: Reverse diode data comparision

Vth vs temperature

Figure 1.18: Schematic for Vth vs temperature

Figure 1.19: Datasheet Vth vs temperature

Figure 1.20: SPICE Vth vs temperature

1.1.2 Dynamic Charateristics

Typical switching curves

Figure 1.21: Schematic for switching behaviour

Figure 1.22: Datasheet Turn on curve

Figure 1.23: SPICE Turn on curve

Figure 1.24: Datasheet Turn off curve

Figure 1.25: SPICE Turn off curve

Typical gate charge

Figure 1.26: Schematic for gate charge

Figure 1.27: Datasheet gate charge

Figure 1.28: SPICE gate charge

Q (datasheet)	Q (simulation)
Qgtot=21nC	Qgtot=23.4nC
Qgs=7.5nC	Qgs=7.57nC
Qgd=2nC	Qgd=2.87nC
QVth=5.2nC	QVth=8.18nC

Table 1.6: Gate charge data comparision

1.2 Capacitors model validation

This section briefly describes the SPICE model behavior compared to the datasheet described behavior

Flying capacitor

no particular notes needed,model fits real behavior,no temperature model available [3]

Figure 1.29: Datasheet Z

Figure 1.30: SPICE Z

HF decoupling capacitor

no particular notes needed,model fits real behavior,no temperature model available [4]

Figure 1.31: Datasheet Z

Figure 1.32: SPICE Z
